Gregory Range Project

- Oz Uranium has applied for one EPM in Queensland which covers an area of approximately 210km²
- The main uranium targets are uranium, copper, silver and tin.
- Gregory Range Project is prospective for high-grade uranium deposits of hydrothermal origin associated with Mesoproterozoic granite and also a range of mineralisation styles including volcanic-hosted uranium, low sulphidation epithermal gold-silver and intrusive related copper-tin-fluorine-molybdenum deposits
